

Dimple Surgery

Overview

Dimples are widely considered a desirable feature all over the world. Dimples are believed to symbolise fortune and fertility in the Eastern world. The frequency of **dimple creation** has grown considerably in recent years due to these potential advantages.

A small glitch in the cheek muscle causes a dimple. As a result, the skin adheres to the connective tissue. While some people may see this as a flaw, others see it as a feature they want to have.

Fortunately, **dimple creation surgery** allows you to get the look you want.

Get dimples with a **dimple surgery**

Dimpleplasty, also known as "**dimple surgery**" or "**dimple creation surgery**," gives you the dimples you have always wished for. The newly formed dimples will be visible even when you are not smiling.

Dimple surgery is common as it is quick, easy, and involves minimal to no downtime. On the same day, you can resume your normal daily activities. You will be fully conscious but not feel pain from the local anaesthetic.

Who can go for **dimple creation**?

All clients have excellent health conditions and reasonable expectations regarding the outcomes of **dimpleplasty**. Clients who are younger than 18 are not considered. Patients who avoid or quit smoking recover more quickly. **Dimple creation** is suitable for those who:

- Want to improve their self-esteem or image
- Want a dimple to beautify their smile
- Soothe discomfort and pain
- Maintain some skin elasticity

Consultation before **dimple surgery**

You will need to plan a consultation before **dimple surgery**. The consultation starts with an opportunity to discuss your concerns, expectations, and ideas about the **dimpleplasty** with your specialist and ask any obvious questions. Your physician will:

- Examine you by focusing on your history
- Explain the process of **dimple creation**
- Consider your preferences and needs when selecting the most suitable treatment option.

Dimpleplasty procedure

The **dimple surgery** is done in an outpatient setting. When **dimpleplasty** is done, you will be able to return home. You can drive home if you have not received sedation.

You will not experience discomfort or pain because the **dimple creation surgery** is safely done under a local anaesthetic. If you are concerned about undergoing **dimple creation surgery**, you can request oral sedation and local anaesthetic injections. Please ask for details about this with the pre-assessment team before the date of your **dimple surgery**.

During the **dimple creation surgery**, a biopsy instrument is placed against the inner cheek (buccal mucosa). The cheek muscles are then cut in a circular pattern. The tissue will be detached, but the skin will remain intact, resulting in a circular reflection. Sutures are used to close the incision. Since these sutures will dissolve, there is no requirement for a second appointment to discard them.

Recovery after **dimple creation**

Dimpleplasty is considered a day procedure, and after the local anaesthetic wears off, you can return to your home. You will get a perfect and carefully positioned dimple after the **dimple surgery** if you choose a qualified specialist and consider all the guidance appropriately for **dimple creation**.

You can experience some swelling the days after the **dimple creation**. However, this will disappear over time.

The stitches that seal the cut in the cheeks will disappear within 14 days of **dimple surgery**. When the recovery phase is complete, the cheek muscle will bind with the skin, forming a natural-looking new dimple.

Complications and risks of **dimple surgery**

During your appointment, the specialist at Dr Madan Aesthetics will review the risks and possible complications of **dimpleplasty** surgery. Possible complications of **dimple surgery** include:

- Nerve injury
- Prolonged cheek swelling
- Delayed wound healing
- Surgical site infection
- Dimple loss
- Postoperative haemorrhage

If complications develop, the patient should consult the physician as early as possible.

Cost of **dimple creation surgery**

Several factors determine the **dimple surgery cost** at Dr Madan Aesthetics. The cost is determined by the doctor's experience, consumables, anaesthesia, clinic services, and whether the process of **dimple creation** is for a single cheek or both cheeks. However, the **dimple surgery cost** is minimal to ensure our patients' comfort.

Why is Dr Madan Aesthetics best for **dimple creation**?

Under the excellent supervision of Dr. Puneet Madan, the medical team at Dr Madan Aesthetics always strives for excellence. Our doctors at Dr Madan Aesthetics are the most skilled and reliable and have extensive experience. Thus, working with us will be a positive and productive experience for you.

Dr Madan Aesthetics is entitled to provide you with the best and most up-to-date treatment equipment. We offer a very well-organised and hassle-free setup while also maintaining proper hygiene. So, schedule your consultation today and embrace world-class medical care at Dr Madan Aesthetics.
